ATLING STEADY REST ROLLER

» Cylindrical Roller

Used to hold the work piece. This type of roller have nearly a plain surface, and therefore this is standard when the Steady Rest is fixed during the processing.

» Cambered Roller

The Cambered rollers have got a convex surface and are used in applications where the steady rest is moving along the work piece.

EXTRA OPEN ARM

Extra open arm is an option to increase the opening of the arms to give more space to apply the work piece. The extra open arm track plate can be installed in the steady rest or purchased as a spare part and replace a standard track plate, on any arm or both. The gripping range does not get affected by this option.
